Dear Ann,

During our discussion on November 7, 2016, Con Edison self-reported one recent instance in which it had incorrectly manifested a TSCA regulated PCB waste. The following is the summary of our initial investigation of this occurrence:

- On October 13, 2016, Con Edison arranged for Clean Venture to flush and clean manhole M18077, located in Queens, New York, using Clean Venture truck Vac-188. This flush and clean generated 500 pounds of waste, which was manifested as lead hazardous waste. Manifest 016335826JJK associated with this waste is attached.
- On October 13, 2016, Clean Venture flushed and cleaned three other Con Edison underground structures using truck Vac-188. From October 14 through October 20, 2016 Clean Venture used truck Vac-188 to flush and clean twelve other Con Edison underground structures. On October 20, 2016, the contents of truck Vac-188, collected from all sixteen underground structures, was off loaded at Clean Earth of North Jersey, a TSDF located in Kearny, NJ. All the waste generated from these activities was manifested as lead hazardous waste. The manifests associated with this truck load are attached. The analysis of the waste performed by Clean Earth following receipt of the truck load was non-detect for PCBs (< 1 ppm). QA/QC Report #158385 is attached.
- On October 21, 2016, after separation of the waste, Clean Earth sent the waste water to Tradebe, a TSDF located in Meriden, CT, for treatment and disposal. Attached is manifest 014738089JJK from Clean Earth to Tradebe. QC analysis of the waste water performed by Tradebe indicated PCBs were < 2 ppm. Also on October 21, 2016, Clean Earth chemically stabilized the remaining solids and sent the waste to WM Grows Landfill located in Morrisville, PA for disposal. Attached are manifests 5125688 through 5125694 from Clean Earth to WM Grows Landfill.
- On November 2, 2016, Con Edison discovered that a sample, collected on July 7, 2014, from an estimated one quart spill of dielectric fluid from electrical equipment contained within manhole M18077 indicated PCBs at 3551 ppm. The sample had been collected as a "swab", meaning absorbent material was used to wipe a surface for collection of the spilled oil for analysis. The analytical report of that sampling event is attached. Based on the discovery of this information, Con Edison contacted the EPA on November 3, 2016.

In response to this discovery, Con Edison has already taken the following initial actions:

- Con Edison cleaned Manhole M18077 and took post cleanup wipe samples. The wipe sample results, received on November 10, 2016, indicate that this clean-out did not achieve the target level of 10 ug/100cm² for PCBs (the highest result was 95.8 ug/100cm²). The waste generated from this manhole clean-out is being managed as >500 ppm PCB and lead hazardous waste. Another cleanout of Manhole M18077 will be scheduled.
- The Company is working with Clean Venture to complete decontamination of truck Vac-188, which has been taken out of service. In addition, the Company, working with Clean Venture and Clean Earth, has identified

additional loads of waste that were picked up from Con Edison underground structures using Truck Vac-188 before the truck was taken out of service. The manifests associated with this waste are attached.

- Con Edison orally notified Clean Earth of this issue and confirmed that Clean Earth advised WM Grows Landfill of the matter. According to Clean Earth, WM Grows Landfill has been unable at this time to isolate the location where the waste associated with manifests 5125688 through 5125694 was placed.

We are investigating this matter further to confirm the factual details, identify potential causes, and develop steps necessary to help prevent this from happening again. Please note that the above description of this matter is based on a preliminary review and is subject to change based on the outcome of our further investigation.

Regards, Eileen

Lab Sequence Number: 16-07658-001
Incident Number:
Chain of Custody ID: HH22613
Submitter: Mui, Mable
Job Site: Queens
Email to: BQChemLabResults@coned.com; MUIM@coned.com

Date Authorized: 11/9/2016
Date Received: 11/4/2016
Date Sampled: 11/4/2016

NOTE: This report shall not be reproduced, except in full, without the written consent of EHS.
Test results are representative only of submitted samples.

Results of Analysis

Matrix: WIPE GRAB
Description: PCB Wipes in M/H Test Pt# 1
Location: F/O 936 Weirfield St- MH 18077
Sampled: 11/4/2016 11:15 AM By: Kruzynski, Richard W
Structure: MANHOLE MH18077

Test Description	Result	Units	Method	Limits	Qualifier
PCB Analysis					
Aroclor 1016	<0.500	ug/100cm2	EPA 8082A		
Aroclor 1221	<0.500	ug/100cm2	EPA 8082A		
Aroclor 1232	<0.500	ug/100cm2	EPA 8082A		
Aroclor 1242	<0.500	ug/100cm2	EPA 8082A		
Aroclor 1248	<0.500	ug/100cm2	EPA 8082A		
Aroclor 1254	29.4	ug/100cm2	EPA 8082A		
Aroclor 1260	<0.500	ug/100cm2	EPA 8082A		
PCB Total	29.400	ug/100cm2	EPA 8082A		

Status: Authorized
Authorized By: Richard C Yau
